CENTRAL USER
MANAGEMENT

Central User Management makes user management quick and easy. The browser-based user interface is available in 8 languages and is also suitable for mobile devices.

It takes just a few clicks in a single central location to define user rights for one or more welding machines or WeldCube Premium applications – the information is automatically sent to all connected systems.

The result: Big time savings and transparency.

TIME SAVINGS
/ Up to 90% when creating new users in multiple systems (in comparison to creating them on the welding machine itself)
/ User rights automatically sent to connected systems, including to swapped devices or additional new devices
/ Rapid reassignment of NFC card if lost or for a different employee

CENTRALIZED OVERVIEW
/ All users and their rights at a glance
/ List and link connected welding machines and WeldCube Premium applications
/ Traceability throughout the process of all changes to users

WEB API INTERFACE
/ Ability to connect existing user databases or HR systems
/ Avoid entering data twice

What's your
welding challenge?
└── Let's get connected.
